

256Ch 1080P IP Camera Solution

Network Video Surveillance System is a Linux based Video Surveillance Server that ranges in models supporting 16 up to 256 cameras..

Video Matrix Decoder System allows 16 cameras from any server to be displayed on a monitor. The VMDS is configurable from the NVMS.

Network Video Management System allows the user to access all surveillance servers and live view up to 144 cameras at a time. The NVMS allows the user to playback and capture footage from all servers and cameras.

NVMS
